Invitation To Negotiate (ITN)

For A Voucher Application

Questions Submitted – Part 2

ITN#: **192001Voucher**

1. In the initial list of questions submitted on January 10th, we requested existing system documentation for SaFE Including design, architecture, process flow, validation, ERD, existing APIs, etc. In the response document dated January 13th it was indicated that this information will be made available via secure connection method. Can you clarify when this information will be made available to us? The demo was helpful to provide some insight to the system, but this information is essential in effecting our design and estimates for this ITN which are due in a little over a week. At minimum we need the ERD now and the others over the next day or two at the outside.

   The documentation that is available from CFBHN has been sent by email to the identified points of contact for the vendors. This includes the following items: SaFE Requirements, Menu ERD, Vocabulary ERD, SaFE Permissions ERD, and Process Flow.

2. What does the existing SaFE Security Model look like? Roles, membership schema, etc

   See #2.

3. What browsers and minimum versions are to targeted.

Desktop Browsers	Windows	Mac OS	Linux
Internet Explorer	9.0+	N/A	
Microsoft Edge	Current	N/A	
Firefox	Current, previous and ESR		
Google Chrome	Current and previous		
Opera	Current and previous		
Safari	N/A	9.1+	N/A

Mobile Browsers	Version
Safari Mobile	iOS 9.0+
Chrome Mobile	Yes
Opera Mobile	14.0+
IE Mobile	10.0+

4. This is a performance bench mark question, has the production SaFE system been load tested – concurrent users? Concurrent uploads? Concurrent report processing? If so what were the results? What tool was used to measure?

   SaFE is still under development, we are ensuring that it will meet the same requirements that the ITN is requesting.
